

# PCB Designer certification, IPC Certified Interconnect Designer (CID)

## Why ALL PCB Designers should receive CID Certification?

The global technological landscape is ever-changing. To remain relevant and competitive, companies are continuously trying to acquire the training and skills needed to succeed in this shifting environment. This adaptation and educational growth, while abundantly easy to obtain in most fields, is considered a niche segment for those operating in the world of PCB design. Unlike most industries, professional designers have far fewer resources they can utilize to pursue the necessary knowledge and competencies needed to improve performance.

The IPC Designer Certification Program, comprised of Certified Interconnect Designer-Basic (CID) and CID+ (advanced) training, serves this need. As the premiere PCB design training/educational program, the completion of IPC CID course can greatly elevate a designer's skill set and decision-making process, thus positively impacting the organization.

### Duration:

4 Days

### Cost per program:

RM7,950 per participant (HRDF Claimable)

### HRDF INDCERT GRANT\* AVAILABLE FOR

- Contributors: 50% of total course fee/participant
- SMEs contributors: 100% total course fee/participant
- Max 5 participants per company
